Index

Introduction to Timestamping

What is timestamping? What is digital timestamping?

Timestamping and Blockchain

How can we use the Blockchain for timestamping? Why the Blockchain?

OpenTimestamps

Why OpenTimestamps? Questions Examples of OpenTimestamps usage Proofmode

The End

Questions Summary Introduction to Timestamping

• Ascertaining an accurate date on a document

What is timestamping?

- Ascertaining an accurate date on a document
- (Italian) law requires that dates on important documents be ascertained by a public official

What is timestamping?

- Ascertaining an accurate date on a document
- (Italian) law requires that dates on important documents be ascertained by a public official
- What about digital documents?

What is digital timestamping?

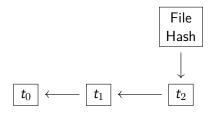

Based on a third-party digital signature

What is digital timestamping?

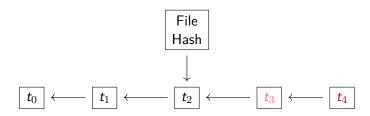

- Based on a third-party digital signature
- Based on a certification authority

Timestamping and Blockchain

How can we use the Blockchain for timestamping?

How can we use the Blockchain for timestamping?

Why the Blockchain?

Safe

Why the Blockchain?

- SafeOpen

Why the Blockchain?

- OpenCheap

OpenTimestamps

• Blockchain is *permissionless* (open)

- Blockchain is *permissionless* (open)
 - Anyone could do timestamping directly

- Blockchain is permissionless (open)
 Anyone could do timestamping dire
- OpenTimestamps is a standard way of doing timestamping trustless (trust no one)

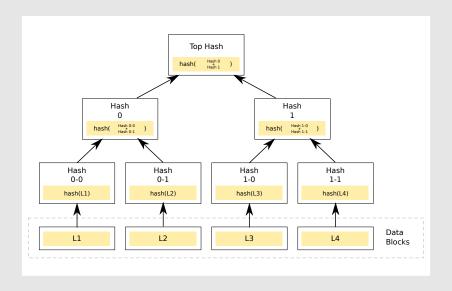

- Blockchain is permissionless (open)
- Open Timestamps is a standard way of doin
- OpenTimestamps is a standard way of doing timestamping trustless (trust no one)
 - Proposed by Peter Todd (Bitcoin Core developer)

- Blockchain is *permissionless* (open)
- OpenTimestamps is a standard way of doing timestamping trustless (trust no one)
 - Proposed by Peter Todd (Bitcoin Core developer)
 - Used by dozens of different companies

- Blockchain is permissionless (open)
 - Anyone could do timestamping directly
- OpenTimestamps is a standard way of doing timestamping trustless (trust no one)
 - Proposed by Peter Todd (Bitcoin Core developer)
 - Used by dozens of different companies
- It's almost infinitely scalable

Examples of OpenTimestamps usage

- opentimestamps.org
- proofmode.org
- · ansiacheck.belloworld.it

Proofmode

Proofmode helps anyone capture and verify smartphone photos and videos of actual reality.

It enhances trusted visual metadata, authenticates camera hardware, cryptographically signs content, and uses third-party notaries for a decentralized, privacy-focused chain of custody.

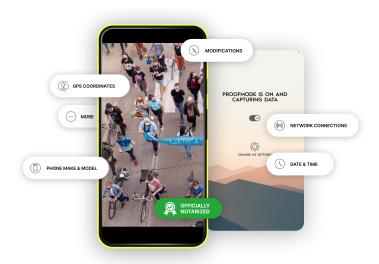

In short, it helps people know your photos and videos are really real.

Proofmode

"We believe in a future, where every camera will have a 'Proof Mode' that can be enabled and every viewer an ability to verify-then-trust what they are seeing."

- Sam Gregory, Witness.org 2013

Proofmode

The End

Thank you for your attention!

If you have any questions or would like to chat more.

feel free to reach out or talk to me after the

session.

I'll be happy to continue the conversation!

Summary
